

CAPTURE PRODUCTION ANALYSIS FOR AREA 67

- |                                    |                               |
|------------------------------------|-------------------------------|
| <i>Actinopterygii</i>              | <i>Clupea pallasii</i>        |
| <i>Pleurogrammus monopterygius</i> | <i>Oncorhynchus gorbuscha</i> |
| <i>Sebastes alutus</i>             | <i>Gadus macrocephalus</i>    |
| <i>Limanda aspera</i>              | <i>Merluccius productus</i>   |
| <i>Oncorhynchus nerka</i>          | <i>Gadus chalcogrammus</i>    |

Area 67 had its peak in capture production in 1987, with total landings of 3.40 million tonnes. The greatest change in mean production for the decade occurred between 1950 and 1959, and 1960 and 1969, with an increase of 122.21 percent.

The top ten species accounted for 88.41 percent of total capture production in 2021. Seventy-five percent of the total capture production is covered by the top five species.
